

WASTEWATER TREATMENT

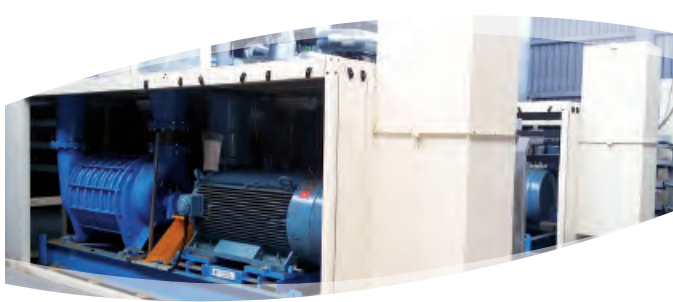

Project: Presa de Guadalupe - Mexico

Model	Qty.
151A.06	4

App: WWT Plant
Tech: Multistage Centrifugal Blower

Pressure (mH2O)	Power (kW)	Flow (m ³ /h)
7,5	220	7.500

The function of the blower, for this application, is to supply air to one or several tanks in order to bring oxygen to bacteria which degrade the organic matter. To inject this air, the blower must overcome the resistance, or backpressure, due to the water height and diffuser/piping losses.
